AT A GLANCE

A total of **100 214** people tested for HIV:
73 000 females and **27 214** males

1966 (93%) Successfully linked to care

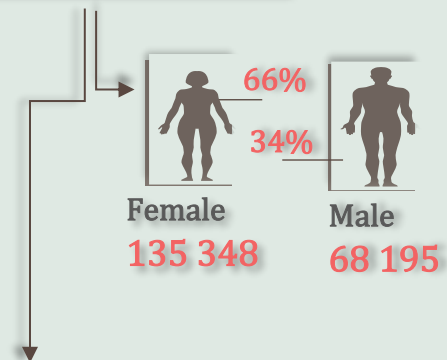

❖ **1 981** Patients newly started on ART of which **94% (1 870)** were eligible for TPT and **68% (1 273)** started TPT

❖ TB Screening for Quarter four (Q4) is **96%** - among **127 867** follow-ups

Reporting Rate per Programme Area

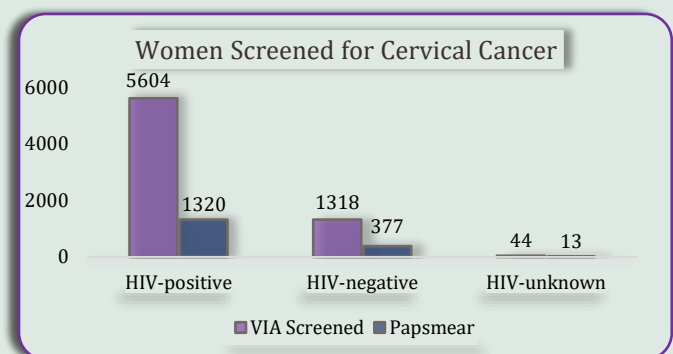

Programme	Number of. (Measure)	Expected to Report	No. Reported	Reporting Rate
HTS	Facilities	356	352	99%
ART	Facilities	353	349	99%
CECAP	Districts	36	36	100%
VMMC	Districts	36	35	97%
MIMS	Organisations	9	9	100%

203 543 HIV+ active patients on antiretroviral therapy

Viral Load Suppression - 98.1%
(among **140 414** valid VL)

- Male VLS - **97.8%**
- Female VLS - **98.2%**

❖ **5 427** Voluntary Medical Male Circumcisions done

PREFACE

The Response Monitoring and Evaluation (RME) subdivision falls under the Expanded National AIDS Response Coordination division of the Directorate of Special Programmes (DSP) within the Ministry of Health and Social Services (MHSS). The RME subdivision has three main roles that includes, (1) supporting the Directorate of Special Programmes in coordination of routine data collection, (2) Shepherding of research and evaluation and (3) Coordination of the HIV and AIDS multi-sectoral monitoring and evaluation activities as part of the UNAIDS “Three Ones Principles” which relates to a One National AIDS Authority, One Coordination and One Monitoring and Evaluation Framework.

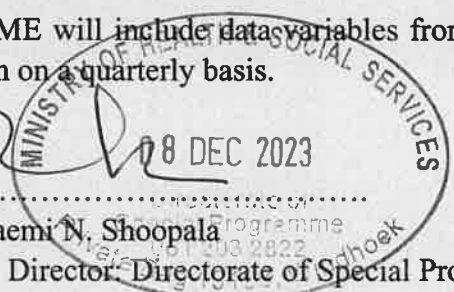

This Bulletin is part of an agreed requirement outlined in various documents as a deliverable of the RME subdivision. One such document is the National Strategic Framework (NSF) for HIV and AIDS Response in Namibia 2017/18 to 2022/23 which is a necessary and critical feature of Namibia’s HIV and AIDS Response. This effort aims to highlight the good practices, challenges and plans being conducted by the subdivision. Additionally, it is a tool that is aimed at informing stakeholders on critical information for various uses, including planning and implementation of HIV/AIDS response.

Data needs vary for different audiences and therefore exhibiting the progress of implementation of various programmes can never be sufficient. The expectation of this Bulletin focuses on the data and progress done for quarter one which runs from April to June of the 2023/24 financial year.

Data systems in many parts of the world face challenges of human resource constraints at all levels, limited infrastructures, and the level of data quality. These general challenges among others also affect the RME subdivision. The RME is continuously engaging various stakeholders to seek and implement various activities to improve data quality. Data collected by RME is subjected to rigorous processes to ensure quality. These efforts form the basis of our strong confidence in the data that RME produces.

The Directorate extends gratitude to all relevant stakeholders involved in the data collection, management and reporting for their continuous support and engagement in the HIV response. The Directorate would like to encourage various stakeholders and the public to utilize the information contained in this document.

The RME will include data variables from other programmes and continue the production of this bulletin on a quarterly basis.

Ms. Naemi N. Shoopala
Acting Director: Directorate of Special Programmes

LIST OF ABBREVIATIONS

AIDS	Acquired Immunodeficiency Syndrome
ART	Antiretroviral Therapy
CECAP	Cervical Cancer Prevention
COVID-19	Coronavirus Disease

SUMMARY NOTES

The Quarterly Bulletin presents HIV and related programmes performance data for the period of April to June 2023. Data in this Bulletin is presented in two sections. Section one which presents data from the Ministry of Health and Social Services (MHSS) health facilities and Section two which presents data that was collected from non-MHSS health services providers under the Multi-Sectoral Information Management System (MIMS).

The data in this bulletin covers program areas of HIV Testing Service (HTS), Antiretroviral Therapy (ART), TB screening among HIV positive patients, TB Preventative Therapy (TPT), Voluntary Medical Male Circumcision (VMMC) and Cervical Cancer Prevention (CECAP) Program.

Interpretation of the data should be based on relevant inputs that were made, service delivery processes that took place during the quarter as well as other relevant internal and external contexts that influence program performance. For example, the CECAP program is more suited to provide an explanation for a decrease in the number of women screened for Cervical Cancer (CxCa) using Visual Inspection with Acetic Acid (VIA) method during this quarter compared to the previous one.

A total of 100,214 individuals were tested for HIV infection (72.8% females) during the quarter of April to June 2023. Of these, 2,123 (2.1%) were found to be HIV positive. On the other hand, a total of 1,981 individuals were newly initiated on ART this quarter. While a total of 203,543 people living with HIV (PLHIV) were actively receiving ART. This quarter also showed an HIV viral load suppression rate of 98% among those who received viral load test in the last 12 months.

During this quarter, less clients were tested for HIV compared to the last quarter i.e. 100,214 compared to 111,458 respectively. The number of patients active on ART this quarter increased by 1,674 from 201,869 in Q4 of the previous year to 203,543 this quarter. The number of women screened for cervical cancer using VIA method has decreased from 7,555 last quarter to 6,966 during this quarter.

About 5,427 VMMC were done during the period of April to June 2023. Young men aged 15-19 years made up 60.7% of the beneficiaries. The data reported under the MIMS on VMMC represent only numbers coming from private practitioners registered with Abt Associates.

Lastly, data reported through the MIMS highlighted the significant contribution that community-based organisations are making in HIV case finding, particularly among men, with high positivity rate. The MIMS Program under RME has done a commendable work in obtaining ART data from WBCG and NHP and this is a result of continuous engagement with the Civil Society Organizations (CSO) and private sector. RME will continue to work closely with concerned stakeholders to facilitate this process.

SECTION I: DATA REPORTED THROUGH MHSS FACILITIES

HIV Testing

HIV Testing Service by Sex

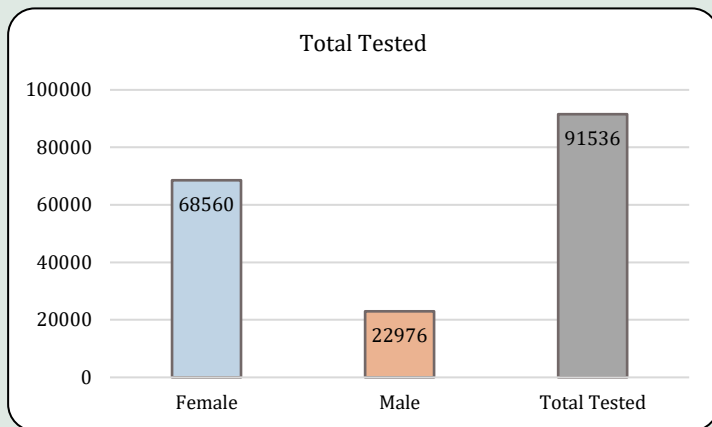

Figure 1: Total Number of Clients Tested for HIV by Sex in MHSS Health Facilities in Namibia, April to June 2023

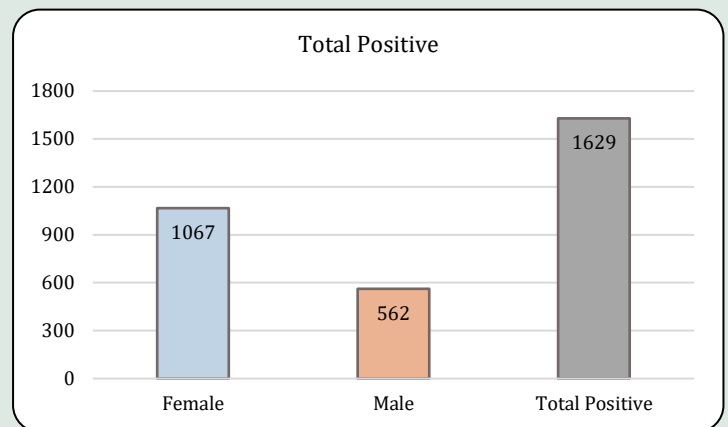

Figure 2: Total Number of Clients Tested Positive for HIV by Sex in MHSS Health Facilities in Namibia, April to June 2023

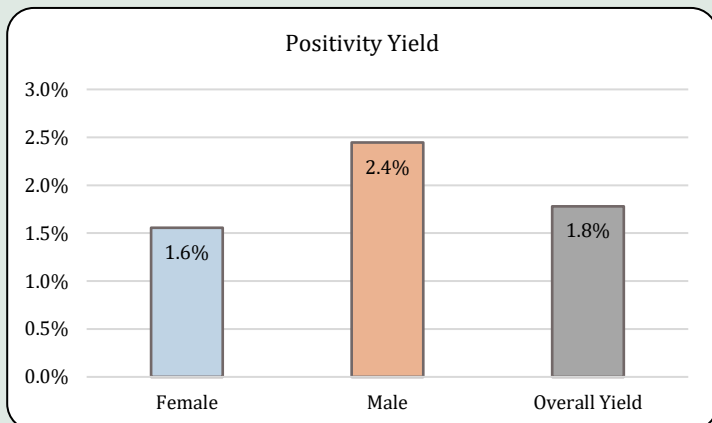

Figure 3: HIV Positivity Yield by Sex in MHSS Health Facilities in Namibia, April to June 2023

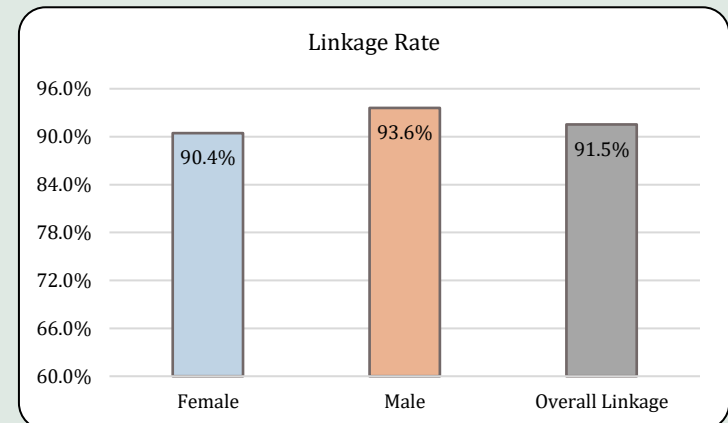

Figure 4: Proportion of Clients Tested HIV Positive and Linked to Care by Sex in MHSS Health Facilities in Namibia, April to June 2023

***Note:** Positivity yield is the percentage of clients who tested HIV positive out of the total number tested for HIV for that specific reporting period. i.e., Female positivity yield = $(\text{Total number of female tested HIV positive} / \text{Total number of females tested for HIV}) \times 100$

HIV Testing Service by Age Group

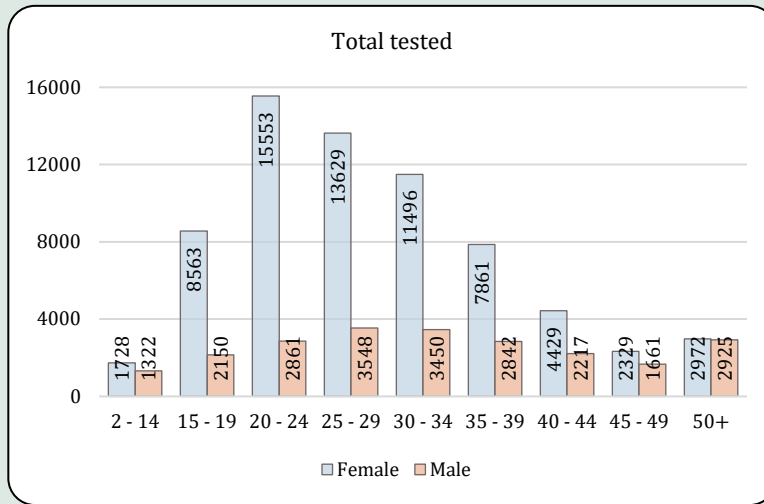

Figure 5: Total Number of Clients Tested for HIV by Sex and Age Group in MHSS Health Facilities in Namibia, April to June 2023

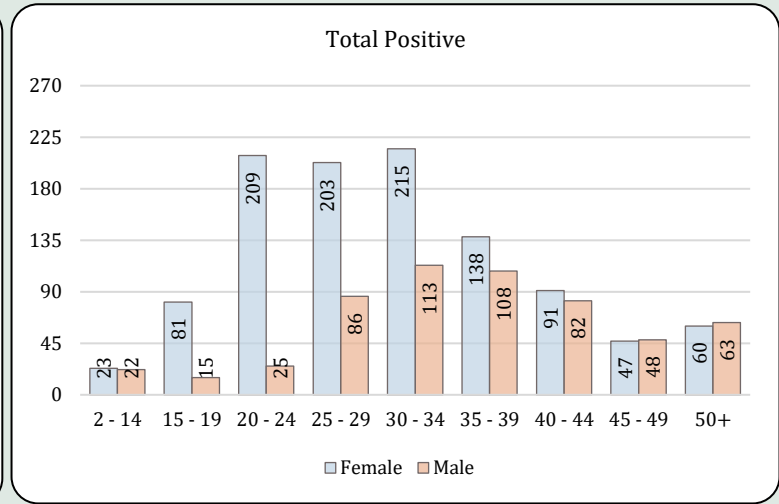

Figure 6: Total Number of Clients Tested Positive for HIV by Sex and Age Group in MHSS Health Facilities in Namibia, April to June 2023

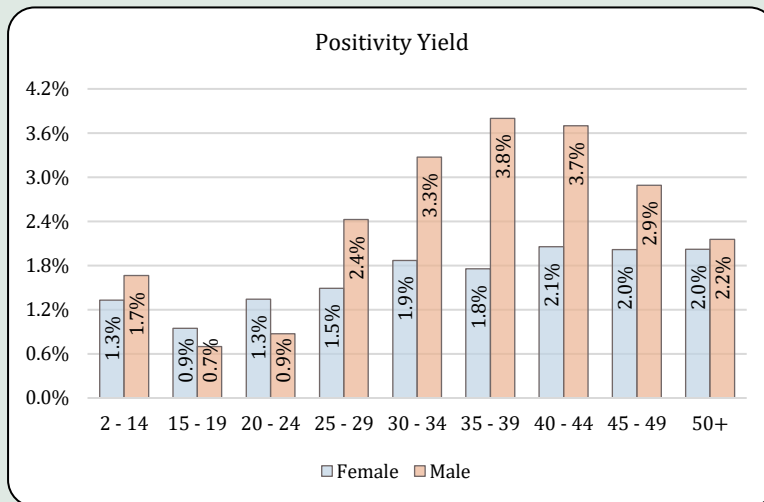

Figure 7: HIV Positivity Yield by Sex and Age Group in MHSS Health Facilities in Namibia, April to June 2023

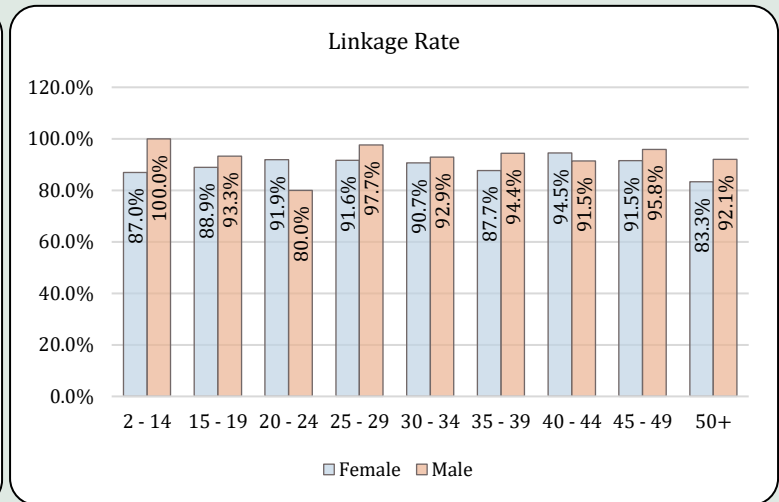

Figure 8: Proportion of Clients Tested HIV Positive and Linked to Care by Sex and Age group in MHSS Health Facilities in Namibia, April to June 2023

HIV Testing Service by Region

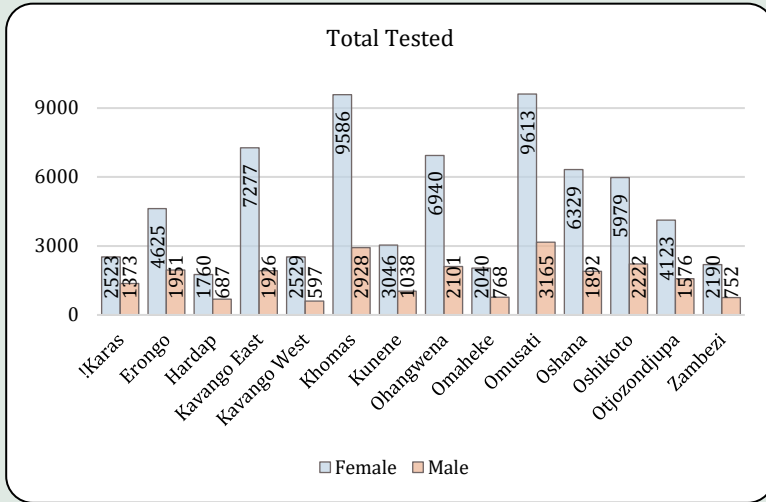

Figure 9: Total Number of Clients Tested for HIV by Sex and Region in MHSS Health Facilities in Namibia, April to June 2023

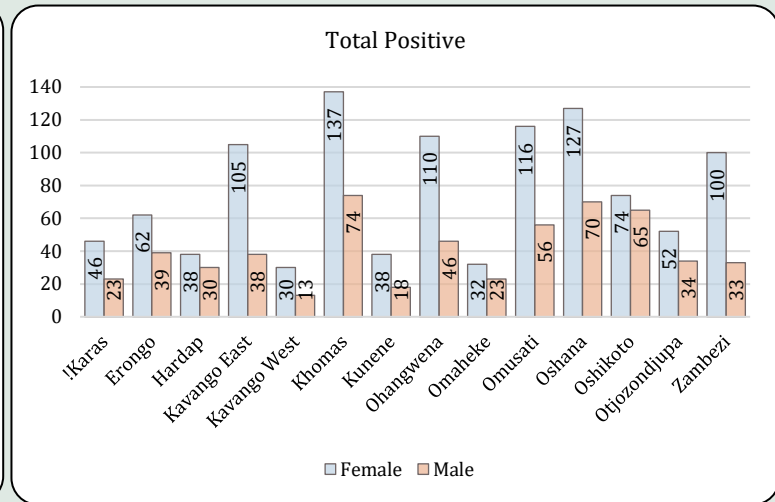

Figure 10: Total Number of Clients Tested Positive for HIV by Sex and Region in MHSS Health Facilities in Namibia, April to June 2023

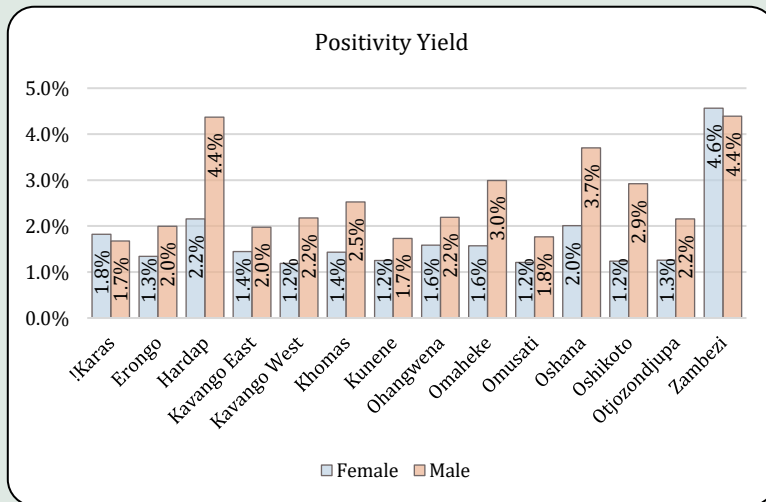

Figure 11: HIV Positivity Yield by Sex and Region in MHSS Health Facilities in Namibia, April to June 2023

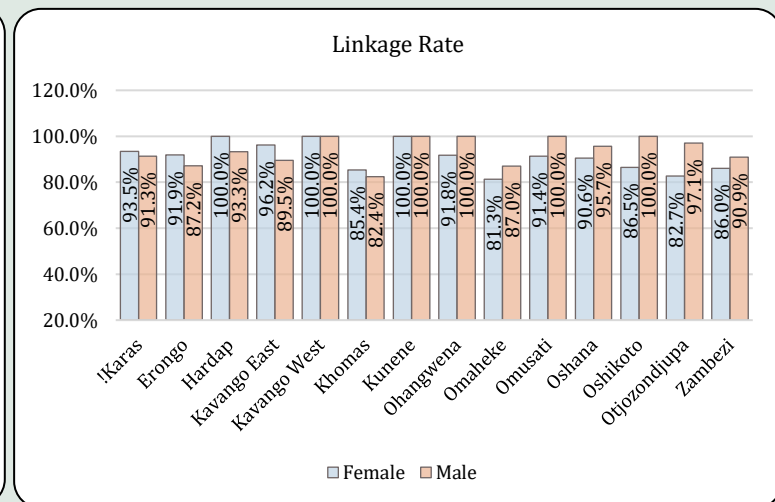

Figure 12: Proportion of Clients Tested HIV Positive and Linked to Care by Sex and Region in MHSS Health Facilities in Namibia, April to June 2023

HIV Testing Service Trends

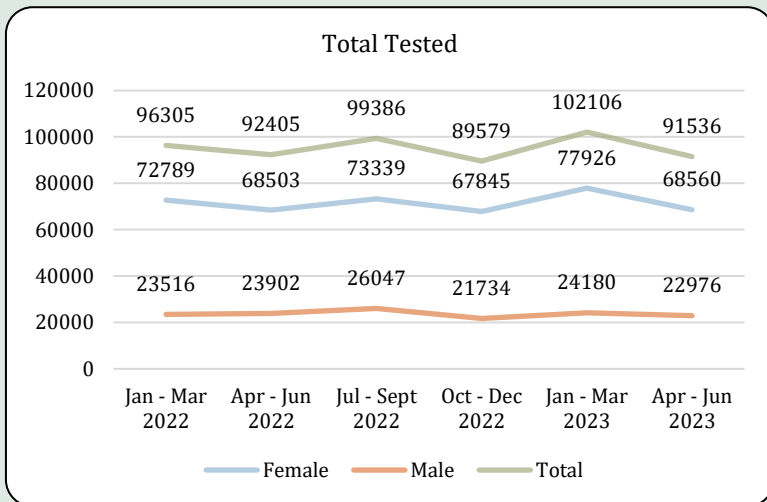

Figure 13: Quarterly Trend of Clients Tested for HIV by Sex in MHSS Health Facilities in Namibia, January 2022 to June 2023

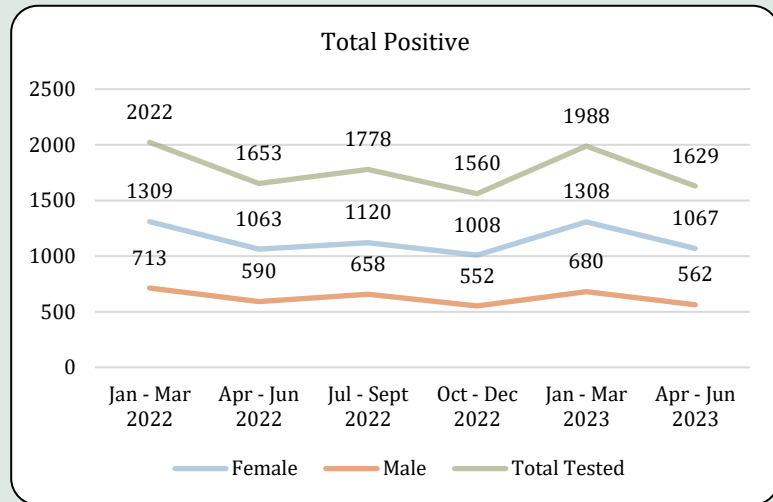

Figure 14: Quarterly Trend of Clients Tested HIV Positive by Sex in MHSS Health Facilities in Namibia, January 2022 to June 2023

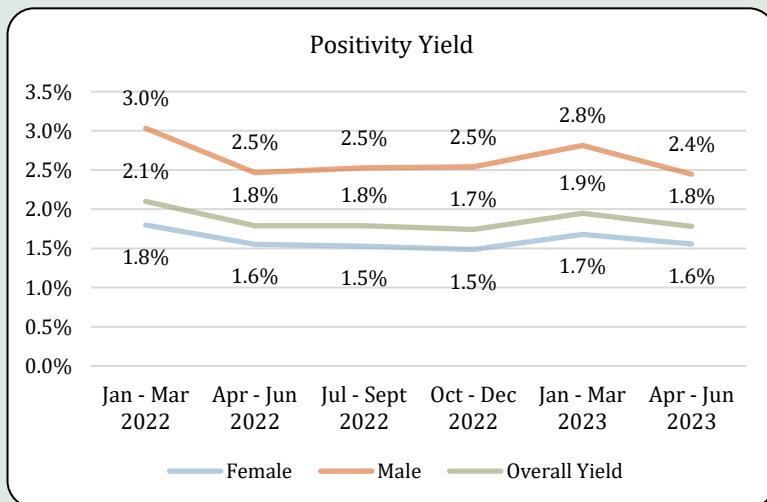

Figure 15: Quarterly Trend of HIV Positivity Yield by Sex in MHSS Health Facilities, January 2022 to June 2023

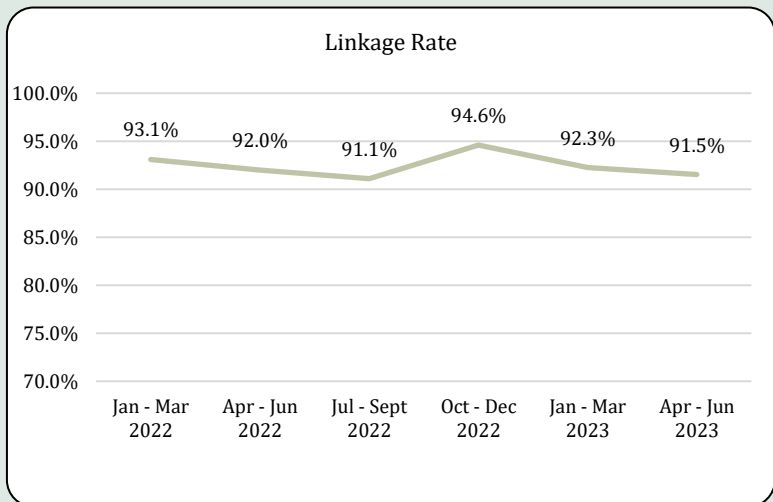

Figure 16: Quarterly Trend of Clients Tested HIV Positive and linked to Care in MHSS Health Facilities in Namibia, January 2022 to June 2023

Period of Last HIV Test

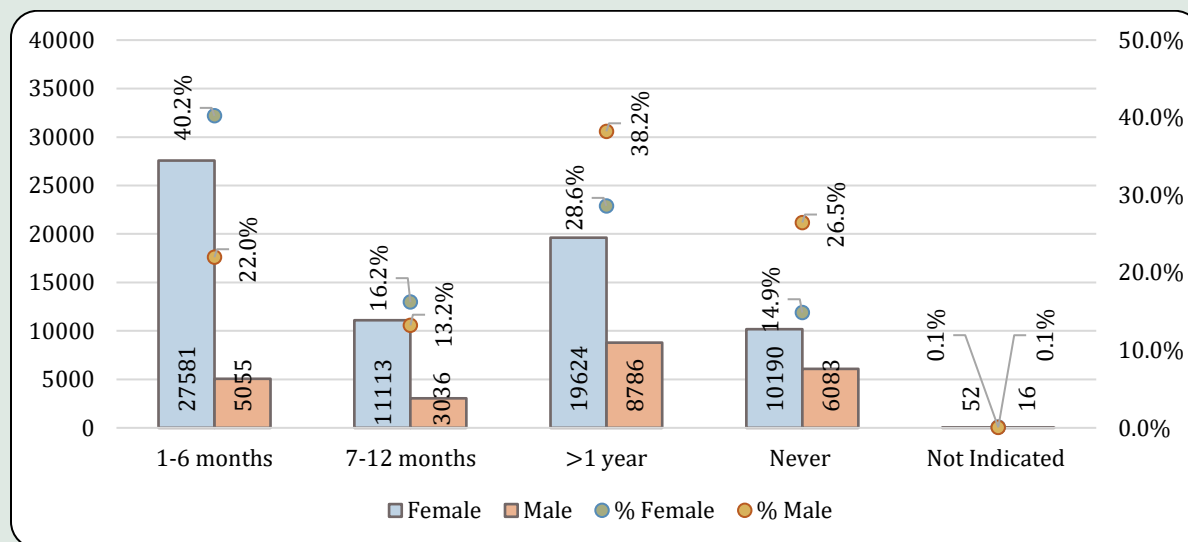

Figure 17: Number and Percentage of Clients Tested for HIV by Sex and Period of Last HIV Test, in MHSS Health Facilities in Namibia, April to June 2023

***Note:** The percentage is calculated out of the total tested for the quarter for each sex,
i.e., % Female last tested at 1 – 6 months = $(\text{number of female last tested 1 – 6 months} / \text{Total number of females tested for HIV}) \times 100$

Reporting Rate in HTS Program

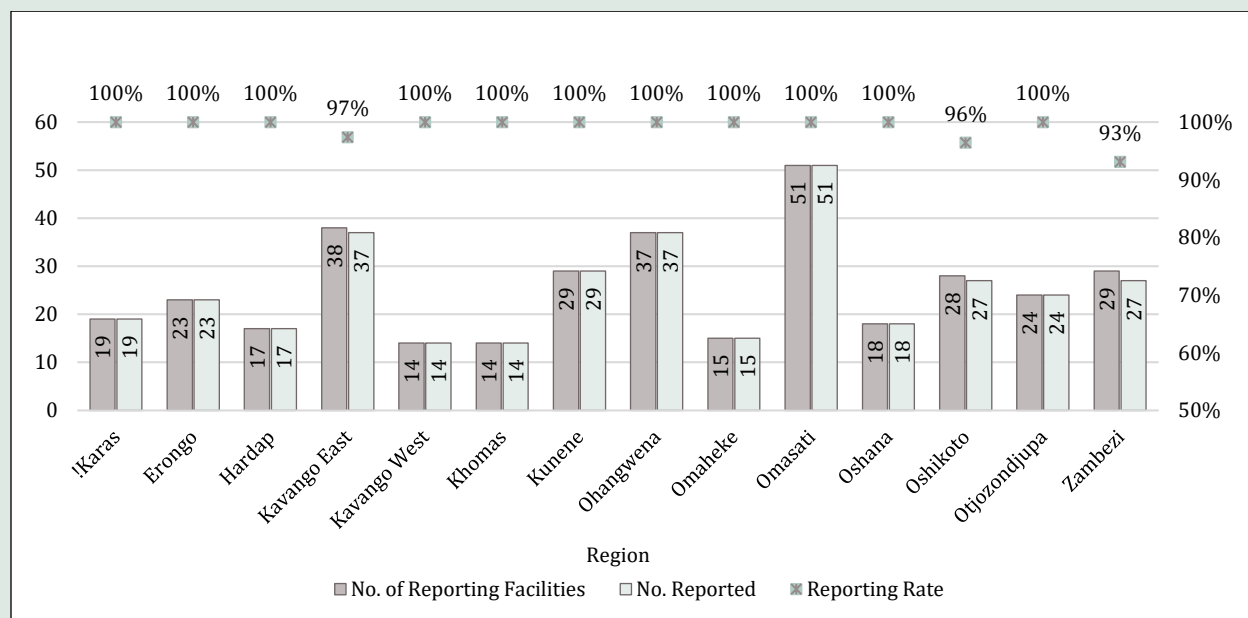

Figure 18: Reporting Rate in HTS by Region for April to June 2023 in MHSS Health Facilities in Namibia

ART Services

Patients Newly Started on ART

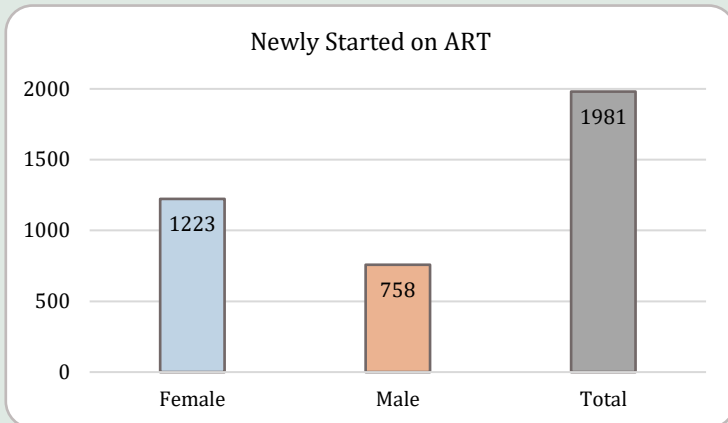

Figure 19: Total Number of Patients Newly Started on ART by Sex in MHSS Health Facilities in Namibia, April to June 2023

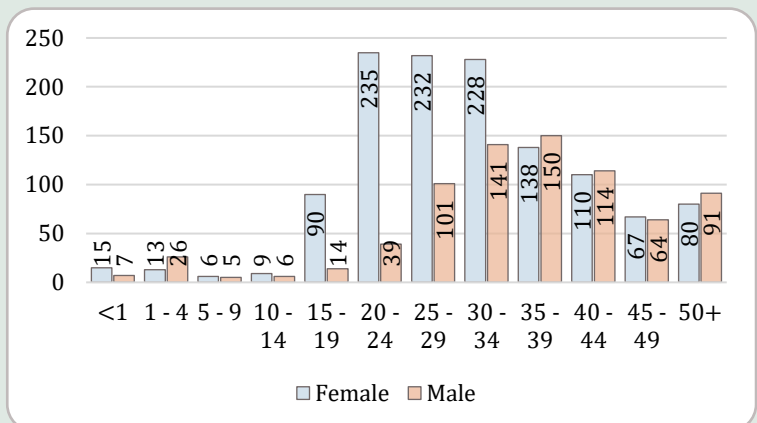

Figure 20: Total Number of Patients Newly Started on ART by Sex and Age Group in MHSS Health Facilities in Namibia, April to June 2023

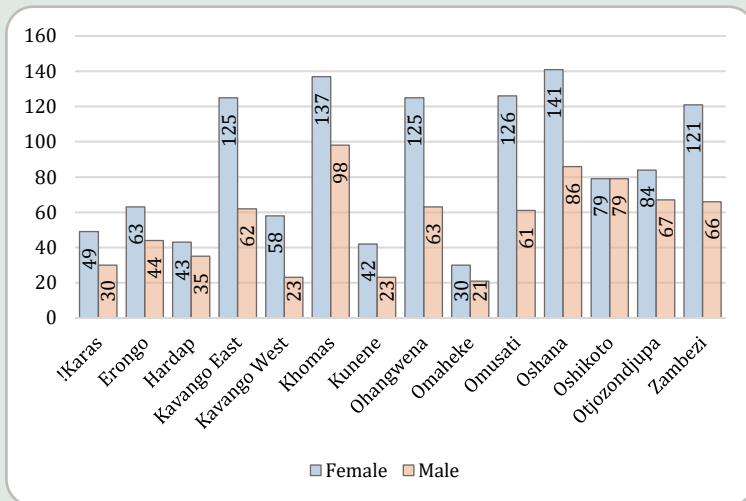

Figure 21: Total Number of Patients Newly Started on ART by Sex and Region in MHSS Health Facilities in Namibia, April to June 2023

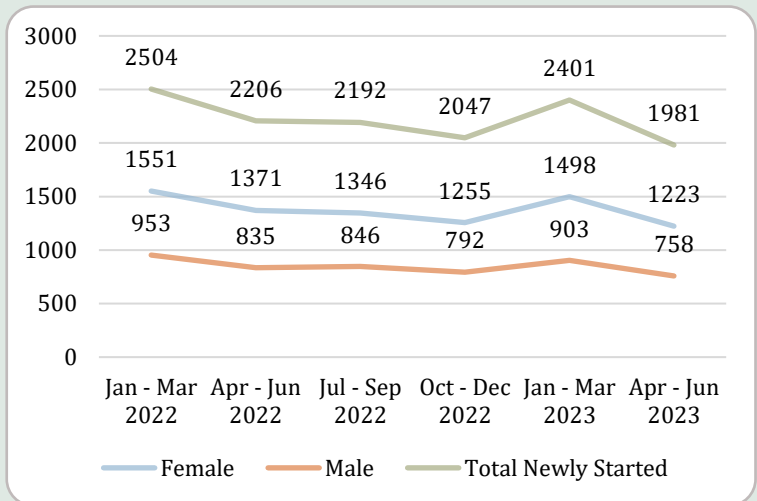

Figure 22: Quarterly Trend of Patients Newly Started on ART in MHSS Health Facilities in Namibia, January 2022 to June 2023

***Note:** The number of newly started on ART in all quarters except the one of Jan – Mar 2023 is comparable. There is a trend of high new on ART during (Jan – Mar) quarters as it was observed for the same quarter in 2022.

Patients Currently Active on ART

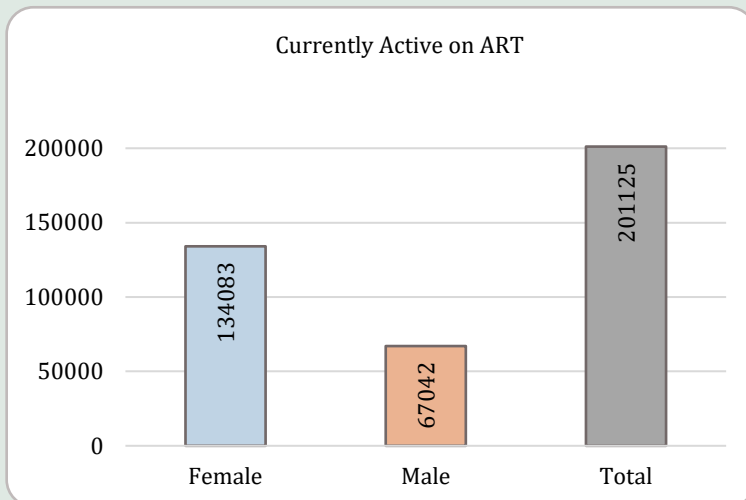

Figure 23: Total Number of Patients Currently on ART by Sex in MHSS Facilities in Namibia, April to June 2023

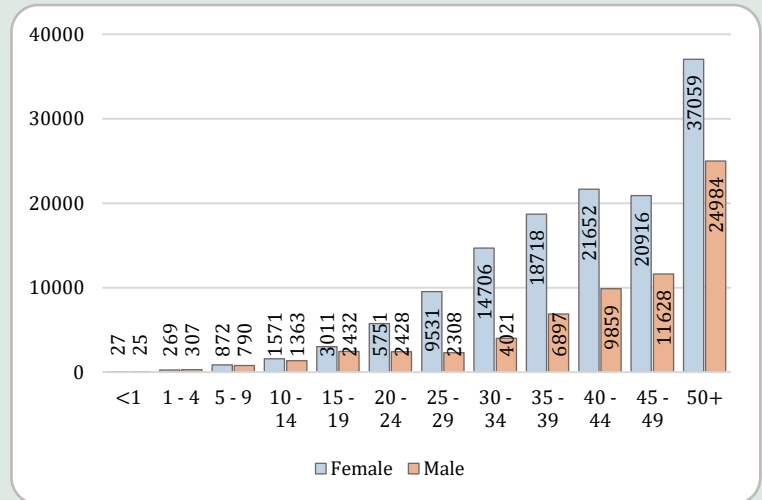

Figure 24: Total Number of Patients Currently on ART by Age Group and Sex in MHSS Health Facilities in Namibia, April to June 2023

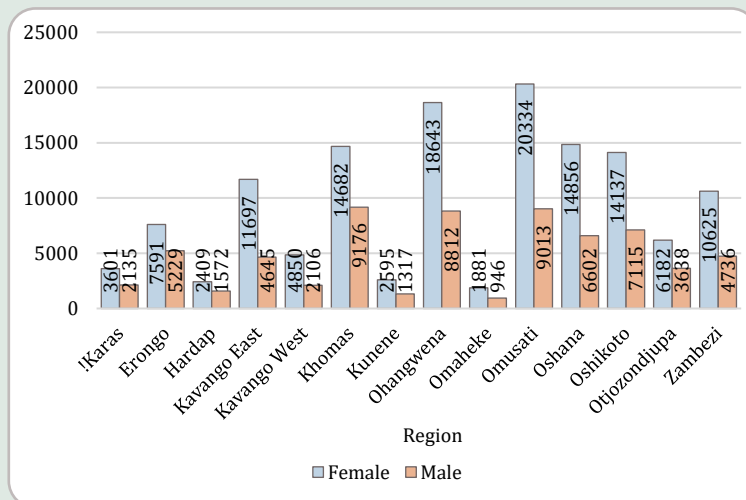

Figure 25: Total Number of Patients Currently on ART by Region and Sex in MHSS Health Facilities in Namibia, April to June 2023

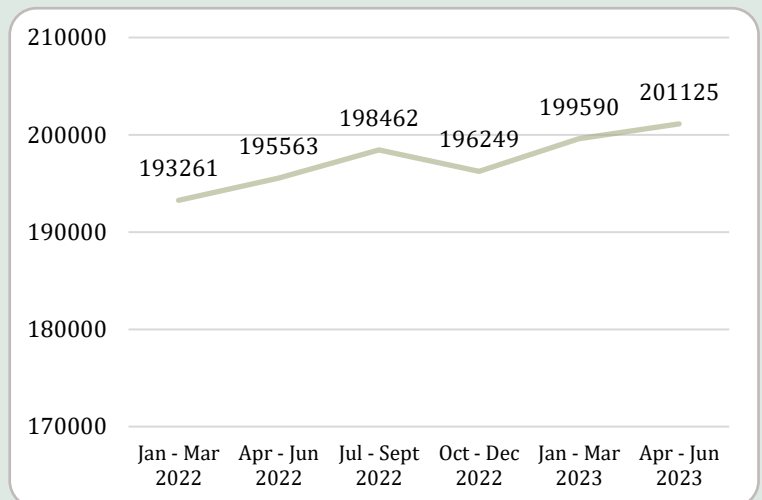

Figure 26: Quarterly Trend of Patients-Currently-on-ART by Sex in MHSS Health Facilities in Namibia, January 2022 to June 2023

TB Screening

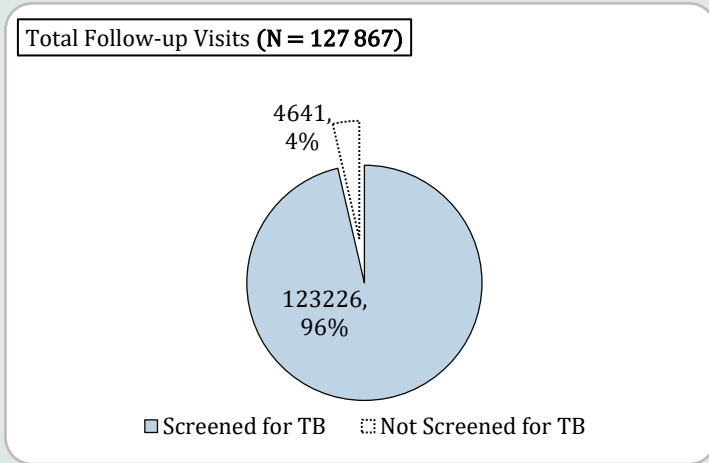

Figure 27: Proportion of patients Screened for TB at Follow-Up Visits in MHSS Health Facilities in Namibia, April to June 2023

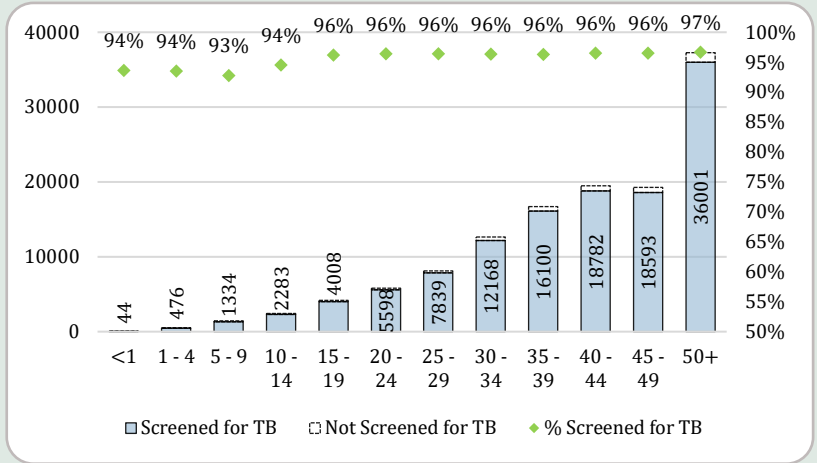

Figure 28: Proportion of patients Screened for TB at Follow-Up Visits by Age Group in MHSS Health Facilities in Namibia, April to June 2023

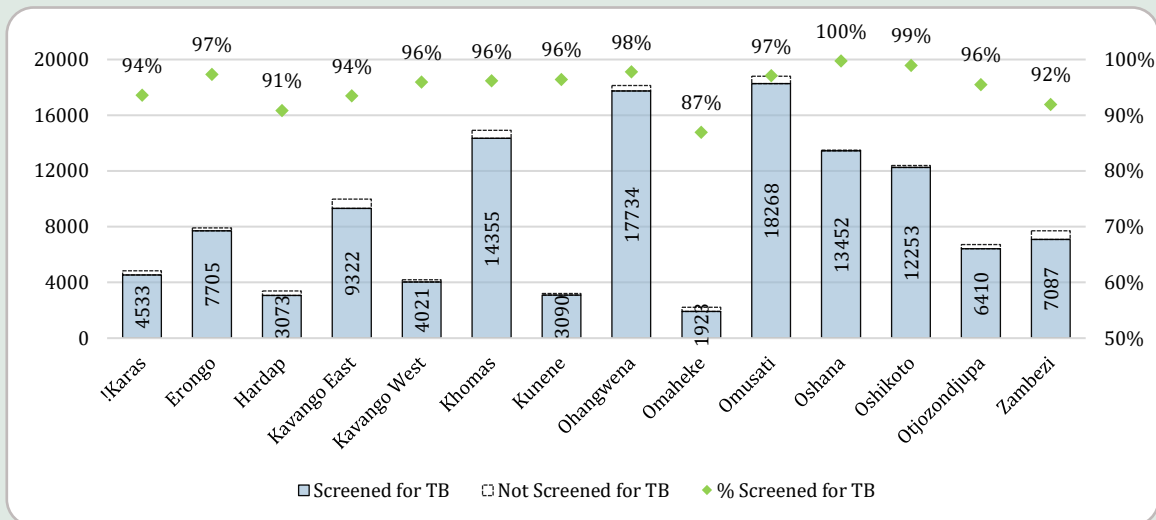

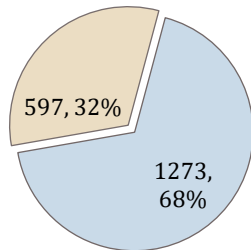

Figure 29: Proportion of Patients Screened for TB at Follow-Up Visits by Region in MHSS Health Facilities in Namibia, April to June 2023

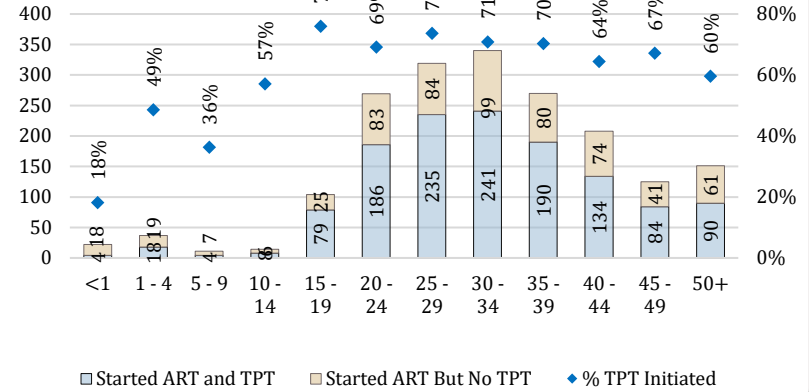

TB Preventative Therapy (TPT)

Total ART New Initiations eligible for TPT: **1 870**

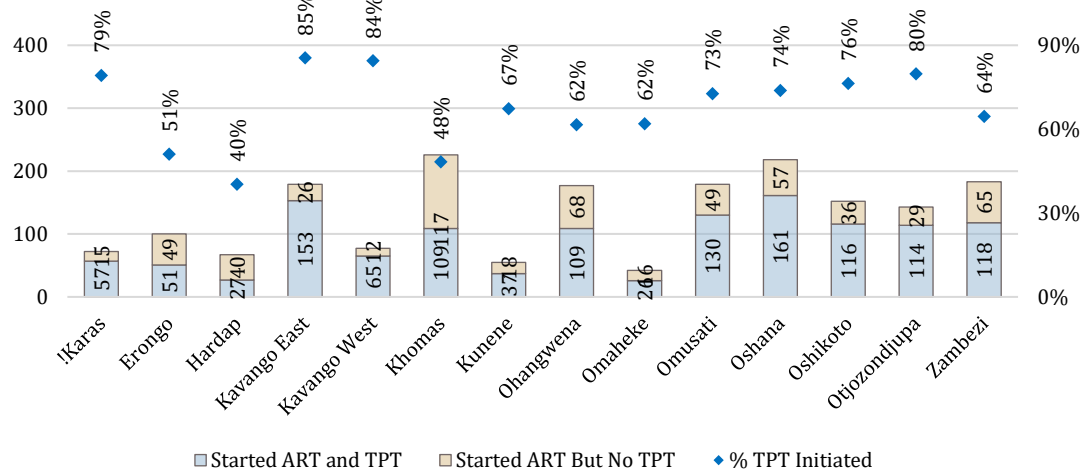

Started ART and TPT Started ART But No TPT

Figure 30: Proportion of Patients Newly Started on ART who were Eligible for TPT and were Initiated on TPT in MHSS Health Facilities in Namibia, April to June 2023

Started ART and TPT Started ART But No TPT % TPT Initiated

Figure 31: Proportion of Patients Newly Started on ART who were Eligible for TPT and were Initiated on TPT by Age Group in MHSS Health Facilities in Namibia, April to June 2023

Started ART and TPT Started ART But No TPT % TPT Initiated

Figure 32: Proportion of Patients Newly Started on ART who were Eligible for TPT and were Initiated on TPT by Region in MHSS Health Facilities in Namibia, April to June 2023

Viral Load Testing and Suppression

Total Viral Load done: 140 414

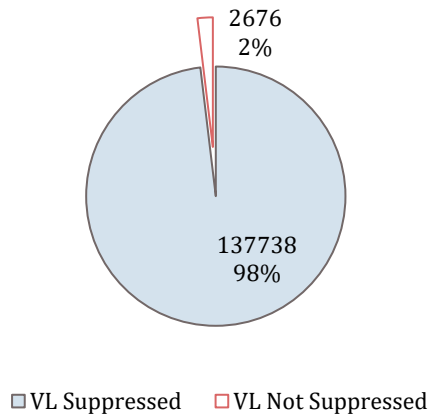

Figure 33: Proportion of patients with Viral Load Done in the Last 12 Months who are Virally Suppressed (VL<1000 copies/μl of blood) in MHSS Health Facilities in Namibia, June 2023

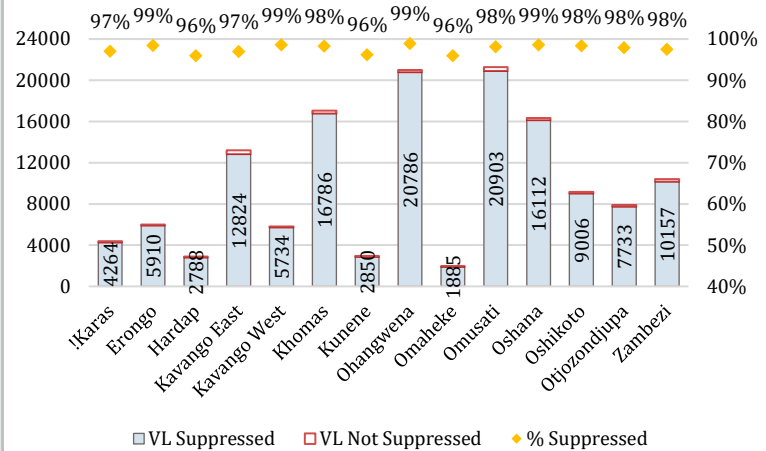

Figure 34: Proportion of patients with Viral Load Done in the Last 12 Months who are Virally Suppressed (VL<1000 copies/μl of blood) by Region in MHSS Health Facilities in Namibia, June 2023

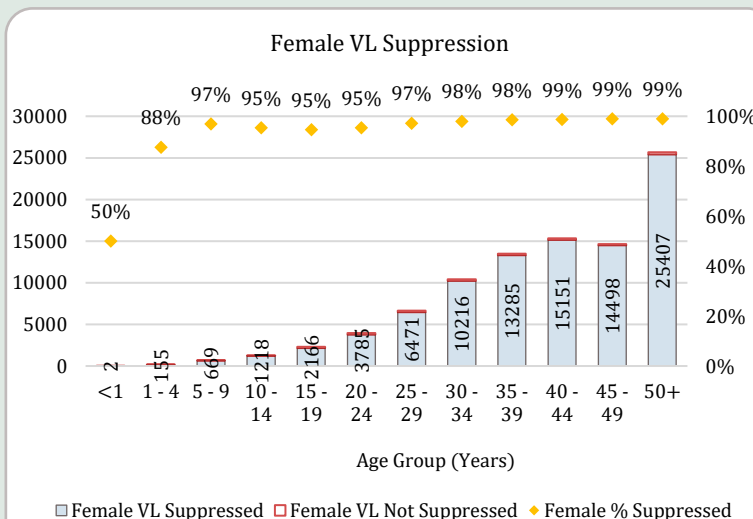

Figure 35: Proportion of Female Patients with Viral Load Done in the Last 12 Months who are Virally Suppressed (VL<1000 copies/μl of blood) by Age Group in MHSS Health Facilities in Namibia, April to June 2023

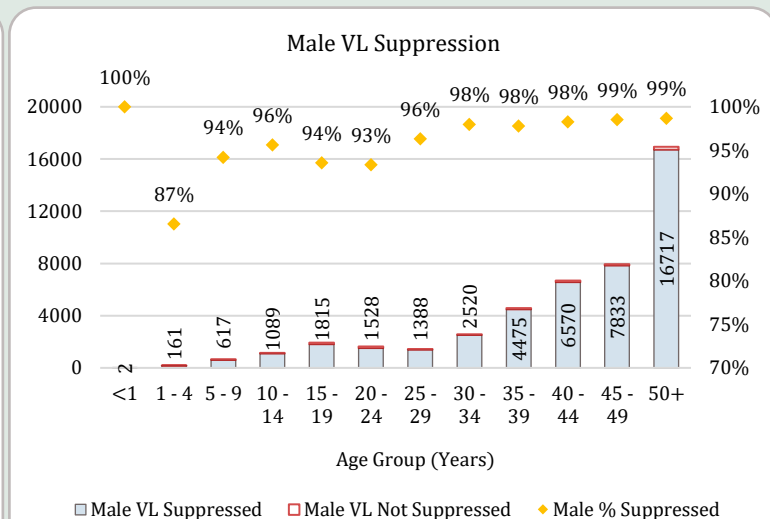

Figure 36: Proportion of Male patients with Viral Load Done in the Last 12 Months who are Virally Suppressed (VL<1000 copies/μl of blood) by Age Group in MHSS Health Facilities in Namibia, April to June 2023

Patients Reported to have Died While on ART

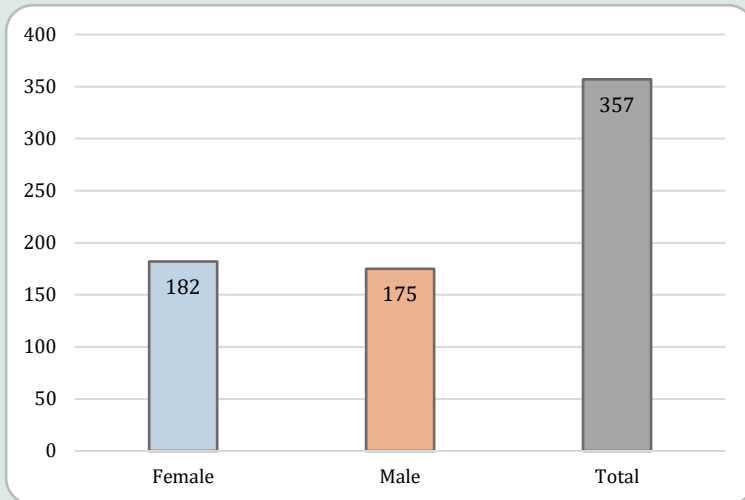

Figure 37: Number of patients Reported to Have Died While on ART by Sex in MHSS Health Facilities in Namibia, April to June 2023

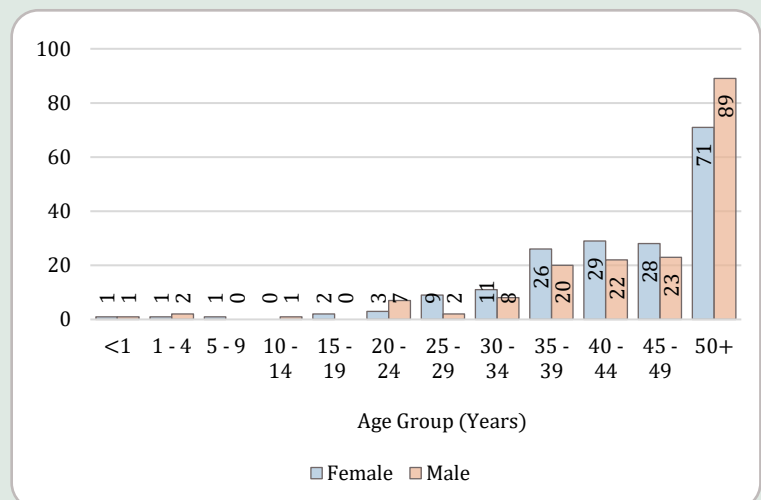

Figure 38: Number of Patients Reported to Have Died While on ART by Age Group and Sex in MHSS Health Facilities in Namibia, April to June 2023

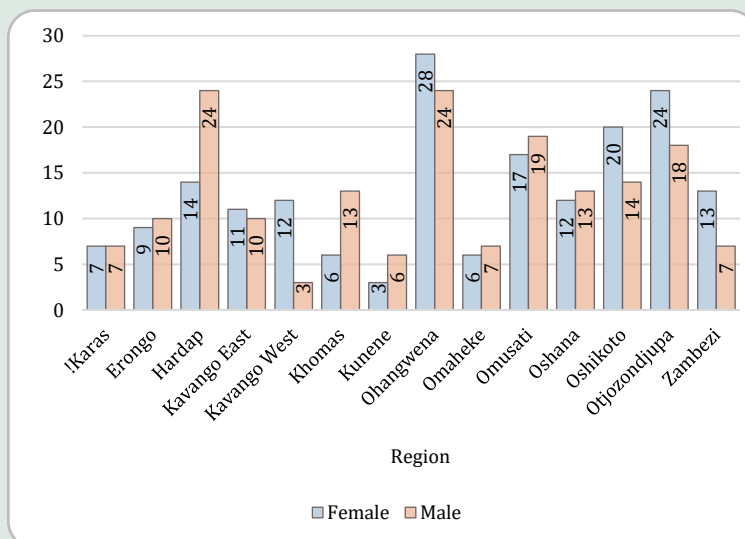

Figure 39: Number of Patients Reported to Have Died While on ART by Region and Sex in MHSS Health Facilities in Namibia, April to June 2023

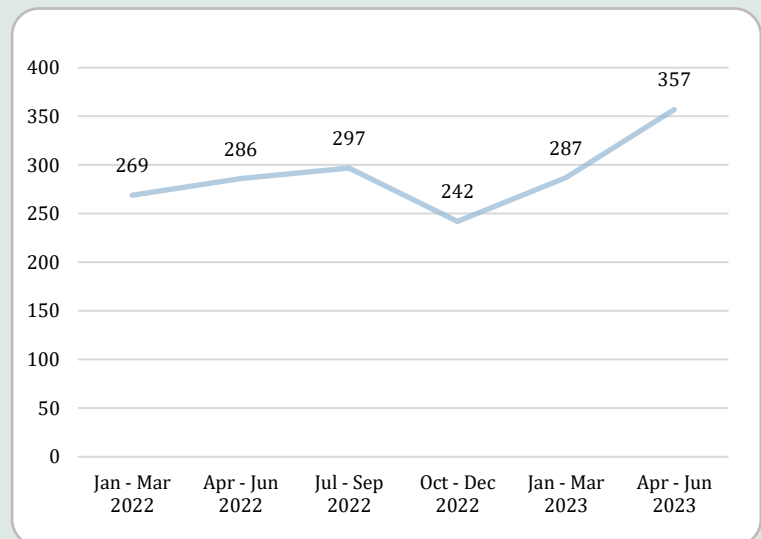

Figure 40: Quarterly Trend of Patients who were Reported to have Died While on ART in MHSS Health Facilities in Namibia, January 2022 to June 2023

Reporting Rate in ART Program

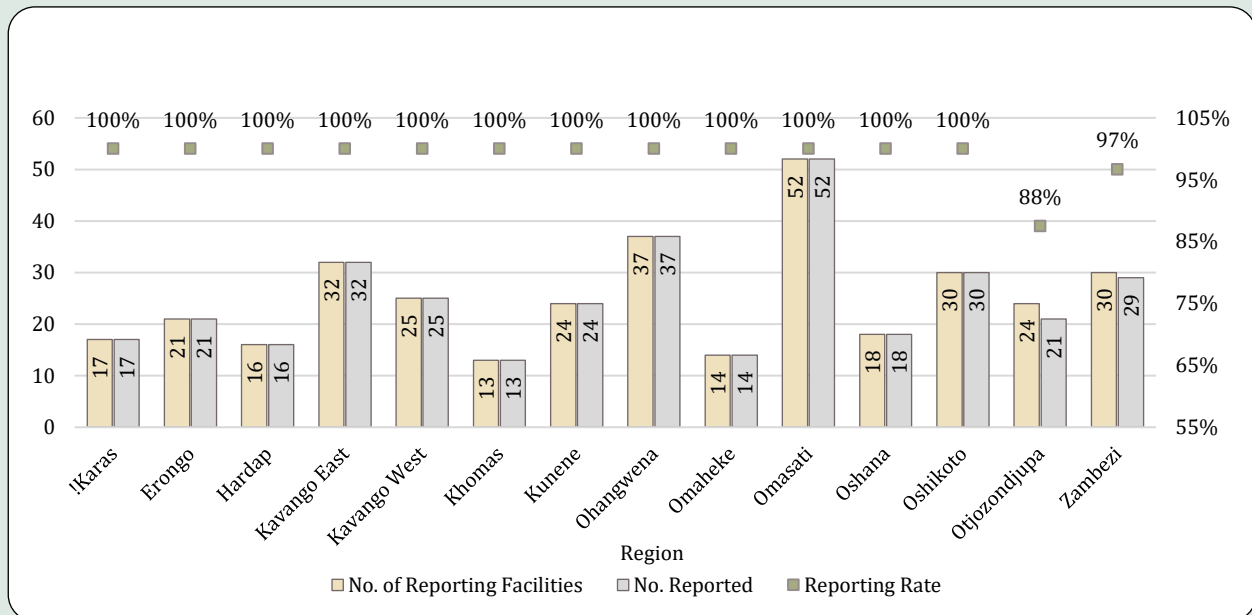

Figure 41: Reporting Rate in ART by Region for April to June 2023 in MHSS Health Facilities in Namibia

***Note:**

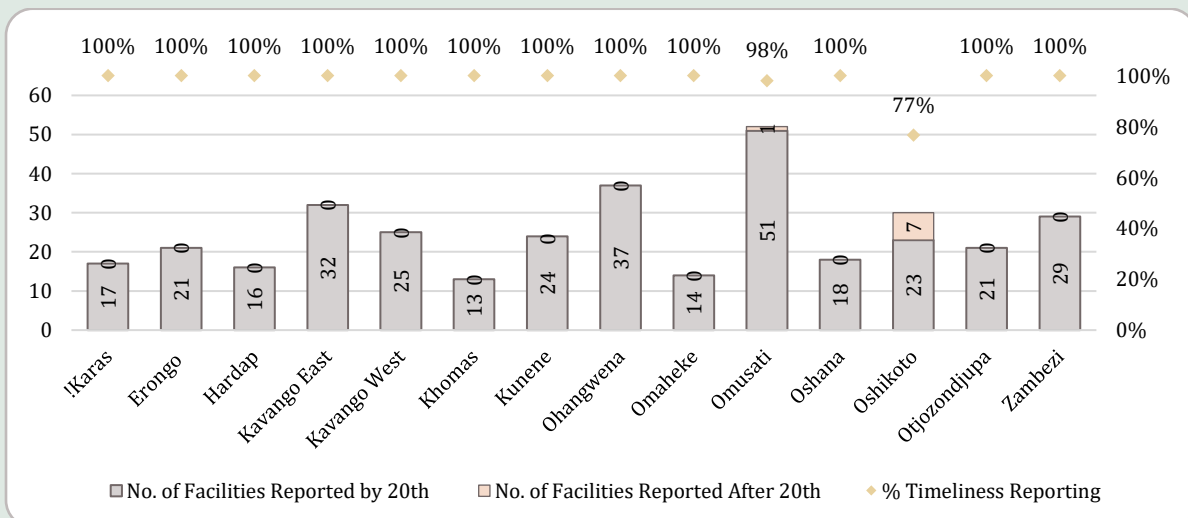

Figure 42: Proportion of Health facilities submitting Reports on Time by Region in MHSS Health Facilities, April to June 2023

Cervical Cancer Screening Program

Total Number Screened

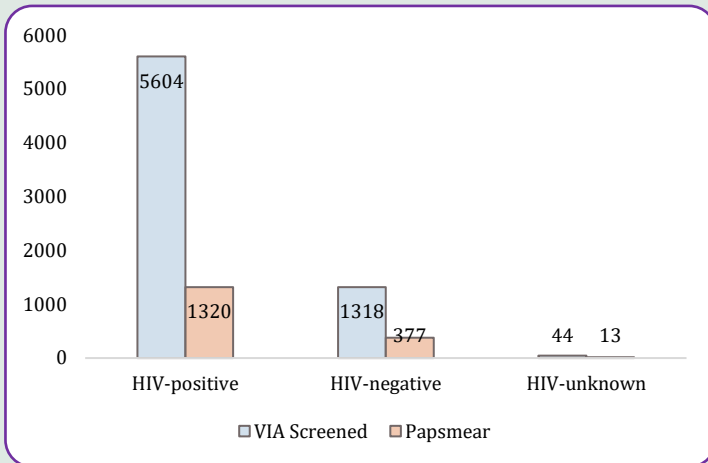

Figure 43: Number of Women Screened for Cervical Cancer by Screening Method and HIV Status in MHSS Health Facilities in Namibia, April to June 2023

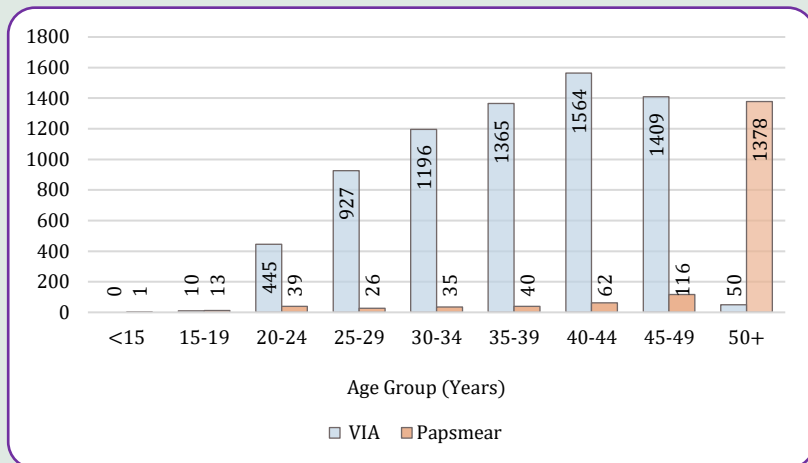

Figure 44: Number of Women Screened for Cervical Cancer by Screening Method and Age Group in MHSS Health Facilities in Namibia, April to June 2023

***Note:** The reason for high number of women screened using Papsmear method among those aged 50+ years is related to programmatic guidelines to apply the technic for this age group

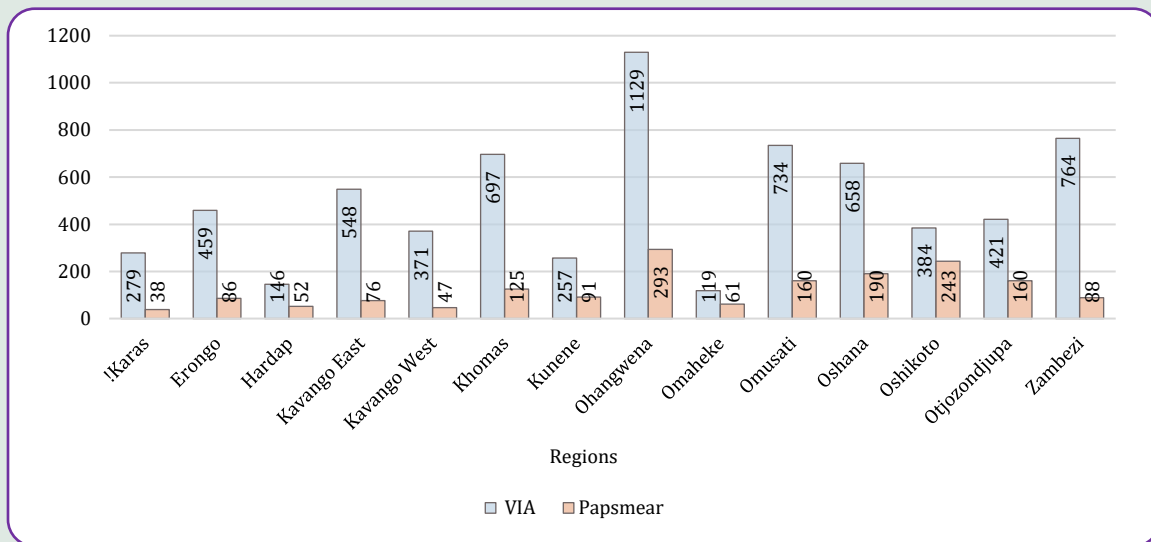

Figure 45: Number of Women Screened for Cervical Cancer by Screening Method and Region in MHSS Health Facilities in Namibia, April to June 2023

Cervical Cancer Screening Results

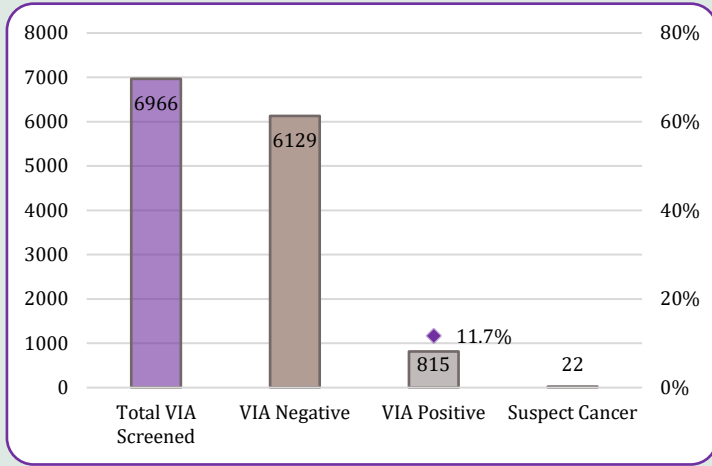

Figure 46: Number of Women Screened for Cervical Cancer Using VIA Method by Screening Result, and VIA Positivity Rate in MHSS Health Facilities in Namibia, April to June 2023

VMMC Quarterly Trends

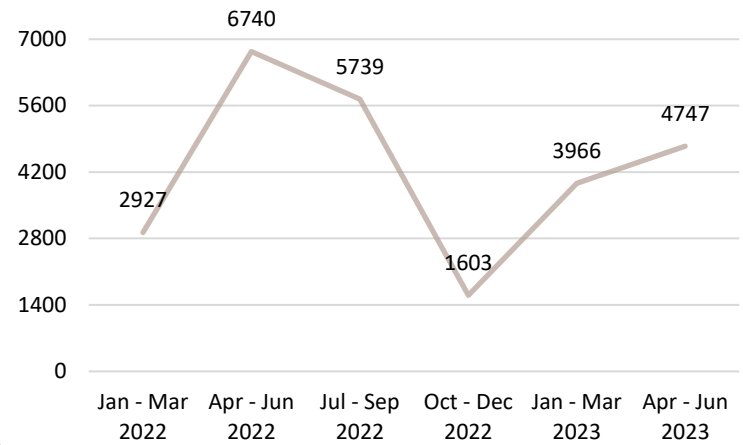

Figure 57: Quarterly Trend for VMMC Done in MHSS Health Facilities in Namibia, January 2022 to June 2023

***Note:** HIV Status Unknown could represent clients who presented a recent HIV negative result, clients who refused HIV testing at VMMC and clients without a documented HIV Status.

Reporting Rate in VMMC

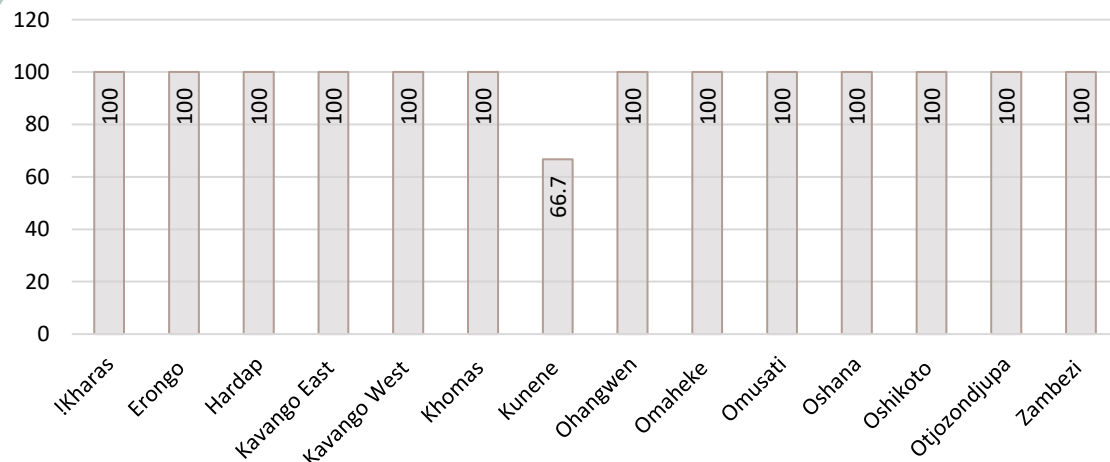

Figure 58: Reporting Rate in VMMC by Region in MHSS Health Facilities in Namibia, April to June 2023

SECTION II: DATA REPORTED THROUGH THE MULTI-SECTORAL INFORMATION MANAGEMENT SYSTEMS (MIMS)

***Note:** MIMS is a system that collects, analyzes, and reports HIV/AIDS response information from non-MHSS facilities including but not limited to private-for-profit facilities, community based Civil Society Organisations (CSO) and other line ministries. The current report contains data from Development Aid from People-to-People (DAPP), Debmarine, Men's Health Program that operates under MHSS/DSP, Namibian Correctional Service (NCS), Omnicare Trust, Walvis Bay Corridor Group (WBCG), Namibia Health Plan (NHP) and Namibia Planned Parenthood Association (NAPPA). These organizations target different population groups such as men (e.g., Men's Health), adolescent girls and young women (e.g., WBCG, DAPP, NHP), key population groups (e.g., NAPPA, WBCG, Omnicare Trust).

HIV Testing Services

HIV Testing Service by Sex
