AT A GLANCE

A total of **95 942** people Tested for HIV: **70 754** females and **25 188** males

Namibia currently has **190, 445 HIV+** patients on treatment

91% Successfully linked to care

2 294 Patients newly started on ART
of which **1 544** started TPT

TB Screening for Quarter Three
91%

HIV Testing Yield - 2.3%

Males - 3.3%

Females - 2.0%

2 203 Voluntary Medical Male Circumcisions done

PREFACE

The Response Monitoring and Evaluation (RME) subdivision, falls under the Expanded National AIDS Response Coordination Division of the Directorate of Special Programmes (DSP) within the Ministry of Health and Social Services. The RME subdivision has three main roles that includes (1) supporting the Directorate of Special Programmes in providing guidance and coordination of routine data collection activities of the Health Sector Response Division (HSRD). (2) Shepherding of research and evaluation activities related to the HSRD. (3) Coordination of the HIV and AIDS multi-sectoral monitoring and evaluation activities as part of the UNAIDS "Three Ones Principles" which calls for countries to have One National AIDS Authority, One Coordination and one Monitoring and Evaluation Framework.

This Bulletin is part of an agreed requirement outlined in various documents as a deliverable of the RME subdivision. One such document is the National Strategic Framework for HIV and AIDS Response in Namibia 2017/18 to 2021/22 which is a necessary and critical feature of Namibia's HIV and AIDS Response. This effort aims to highlight the good practices, challenges and plans being conducted by the subdivision. Additionally, it is a tool that is aimed at informing stakeholders on critical information for various uses, including planning and implementation of HIV/AIDS response.

Data needs vary for different audiences and therefore exhibiting the progress of implementation of various programmes can never be sufficient. The expectation of this Bulletin focuses on the data and progress done for quarter three which runs from October to December of the 2021/22 financial year.

Data systems in many parts of the world faces challenges of human resources constraints at all levels, limited infrastructures, and the level of data quality. These general challenges among others also affect the RME subdivision. The RME is continuously engaging various stakeholders to seek and implement various activities to improve data quality. These ongoing efforts form the basis of our strong confidence in the data that RME produces. As a testament to this, two more developments during 2021 are worth mentioning at this juncture. Namibia completed the national rollout of the Quantum-Electronic Patient Monitoring System (Q-ePMS) replacing the legacy Electronic Patient Monitoring System (ePMS) as well as the Multi Sectoral Information Management System (MIMS)s' District Health Information System (DHIS2) to be used by community-based organizations and HIV program implementing partners.

Despite the ongoing COVID-19 pandemic, RME has continued to meet its regular reporting obligations. The Directorate extends gratitude to all relevant stakeholders for their continuous support and engagement, as well as to encourage the public to utilize the information contained in this document.

The RME will include data variables from other programmes and continue the production of this bulletin on a quarterly basis.

Ms. Anne-Marie Nitschke
Director Directorate of Special Programmes

List of Abbreviations

ART - Antiretroviral Therapy
CECAP - Cervical Cancer Prevention
CSO - Civil Society Organization
CxCa - Cervical Cancer
DAPP - Development Aid from People to People
DHIS2 - District Health Information System
DSP - Directorate of Special Programmes
ePMS - Electronic Patient Monitoring System
HIV - Human Immunodeficiency Virus
HTS - HIV Testing Service
LLETZ – Large Loop Excision of the Transformation Zone
NAMAF – Namibia Association of Medical Aid Funds
MHSS - Ministry of Health and Social Services
MIMS - Multi-Sectoral Information Management System
PrEP - Pre-Exposure Prophylaxis
RME – Response Monitoring and Evaluation
TPT - TB Preventative Therapy
VIA – Visual Inspection with Acetic Acid
VMMC - Voluntary Medical Male Circumcision
WBCG - Walvis Bay Corridor Group

Summary Notes

Welcome to our Quarterly Bulletin that describes HIV and related programmes performance for the period of October to December 2021. Data in this Bulletin is presented in two sections. Section one which presents data from the Ministry of Health and Social Services (MHSS) health facilities and Section two which presents data that was collected from community-based services provided by non-governmental organizations (NGOs) under the Multi-Sectoral Information Management System (MIMS).

This performance data covers program areas of HIV testing, Antiretroviral Therapy (ART), TB screening among HIV positive clients, TB Preventative Therapy (TPT), Voluntary Medical Male Circumcision (VMMC) and Cervical Cancer Screening.

Interpretation of performance results should be based on relevant inputs that were made, service delivery processes that took place during the quarter as well as other relevant internal and external contexts that influence program performance. For example, the CECAP program is more suited to provide the most feasible explanation for a drop in the number of women screened for Cervical Cancer (CxCa) using Visual Inspection with Acetic Acid (VIA) method during this quarter compared to previous one.

A total of 95,942 individuals were tested for HIV infection (73.7% females) during the quarter of October to December 2021. Of these, 2,236 (2.3%) were found to be HIV positive. On the other hand, a total of 2,294 individuals were newly initiated on ART this quarter. While a total of 190,445 people living with HIV (PLHIV) were actively receiving ART. This quarter also showed an HIV viral load suppression rate of 94.4% among those who received the test.

During this quarter fewer clients were tested for HIV compared to the last quarter i.e. 102,799 compared to 95,942 respectively. The number of patients active on ART this quarter decreased by 1,281 from 191,726 to 190,445.

About 2,203 VMMC were done during the period of October to December 2021. Young men aged 15-19 years made up 47.5% of the beneficiaries and about two-thirds of the reported VMMC were performed in four regions, namely Ohangwena, Kavango East, Oshana and Otjozondjupa. The data reported under the MIMS on VMMC represents number reported through ABT Associates and not necessarily numbers from the non-MHSS health facilities.

Lastly, data reported through the MIMS highlighted the significant contribution that community-based organizations are making in HIV case finding, particularly among men, with high positivity rate. There is still a need to encourage the importance of regular reporting by the Civil Society Organizations (CSO). RME will continue to work closely with concerned stakeholders to facilitate this process.

Section I: DATA REPORTED FROM MOHSS FACILITIES

HIV Testing

Total Tested for HIV
